More than any other building design, public facilities help define and influence the image of our communities. Additionally, the long-term and dynamic nature of our public safety facilities means that these buildings are among the most enduring. They have long-term impacts on public space but must also be responsive to ever-changing service requirements. This broad influence and reflection of service and community value requires a well-defined and collaborative design process combined with a clear plan for meeting long-range needs.

FACILITY TRENDS FORECASTING

Due to the public decision making and funding process, more than any other type, public safety facility projects must support the established needs, costs, and functionality. An assessment of existing facility impacts on operations coupled with research of regional and national trends in service delivery offers a qualitative as well as quantitative support for facility needs and decisions. As a regional leader in government facility design with recent projects in over 25 States, our trends forecasting is "tried and true" and includes:

- Existing facility audits and space assessments
- Metric programming for establishment of measureable goals and results
- Customized trends research oriented at unique community concerns
- National database for focused facility comparisons

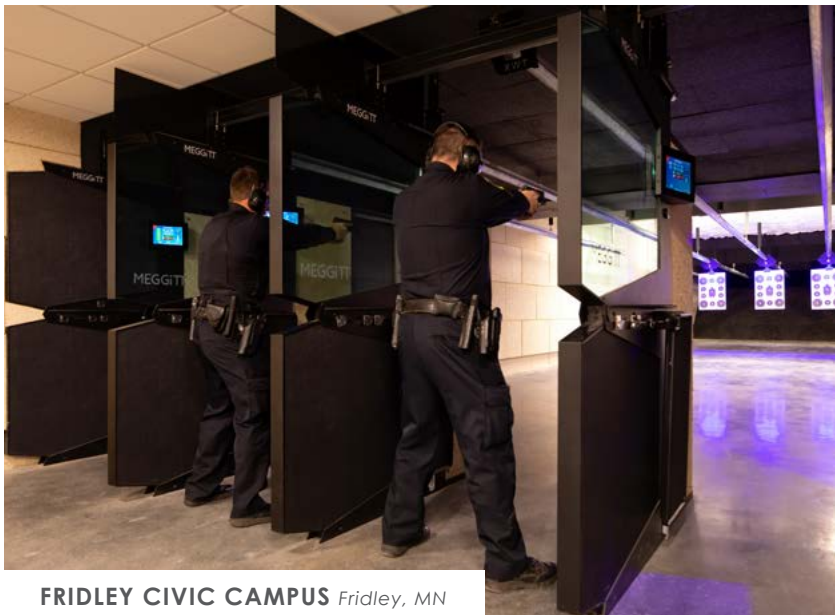

POLICE DEPARTMENT DESIGN

The design of police and law enforcement facilities is driven by a number operational and functional issues for a 24 / 7 facility with a focus on efficient public safety. Some of the aspects that support that goal are:

- Community support
- Public access and service
- Emergency response movement
- Evidence process and retention
- Detainee control, movement and processing
- Patrol and investigation areas and support spaces
- Fire arms training, care and storage
- Training and EOC rooms
- Communication center / Dispatch
- Administrative and Officer support areas
- Vehicle storage

COMMUNITY RELATIONS / OPINIONS

A key component of public project implementation is often funding and community support. Lack of community support may be attributed to either a plan, which does not adequately understand the needs and vision of the community, or a plan, which has not been fully understood by the community. Our team has found the use of a wide range of tools useful in determining community opinions as well as in disseminating the critical supportive information necessary to educate the public on the appropriateness of a project concept.
